

## Notice

In respect of the activity of sale or use of gas (liquefied petroleum gas or LPG) through a piping system to consumers' premises where the supply of gas is received from a storage tank or cylinder:

- (a) The Gas Supply Act 1993 [Act 501] states that such activity shall be licensed via a retail licence. Piping systems include those contained in residential apartments and commercial complexes, where a retail licence may be issued by the Commission to a Joint Management Body (JMB), Management Corporation (MC) or the owner of a piping system in such commercial complex (Owner). Any residential apartments not having a JMB or MC is advised to contact the Commission for identification of party to whom a license shall be issued.
- (b) Continuity of Supply : To ensure continuity of supply, a JMB, MC or Owner is advised to obtain a retail licence from the Commission. All retail licensees are required to enter into a supply agreement with an LPG supplier of their choice on or before 31 March 2020. Commencing 1 January 2020 until such supply agreement is entered into, Gas Malaysia Berhad (GMB) shall be continuing its current gas supply to end-users.
- (c) Management of Gas Supply : A retail licensee who has entered into a gas supply agreement with an LPG supplier may choose whether to manage gas supply to end-users or to appoint Gas Malaysia (LPG) Sdn Bhd (GMLPG) or any other service provider as their agent to carry out the management of gas supply to their end-users.
- (d) Safety of Piping System : A retail licensee is responsible to ensure the safety of the piping system and related facilities. To discharge its responsibility, the retail licensee may appoint any gas contractor registered with the Commission to carry out the necessary works.
